

ASSESSING EARLY NUMBER LEARNING: IS THE ANA USEFUL?

Hamsa Venkat, SA Numeracy Chair, Wits

'Foundation Phase is ok'

| ANA national mean scores | 2012 | 2014 |
|--------------------------|------|------|
| G3 | 41% | 56% |
| G6 | 27% | 43% |
| G9 | 13% | 11% |

Counting-based approaches to calculating

| 1 8 5 A 9 7 1 3 5 A 9 7 1 1 3 5 A 9 7 1 1 3 5 4 9 7 1 1 | x17 20 190 9 6 7 x17 20 190 9 6 7 1 20 190 1 8 6 9 120 100 1000 | 7 14 21 28 35 42 19 |

G5 & G7, Schollar, 2008

Findings lead to interest in ...

- What is it about how mathematics (and esp number) are understood in FP that seem NOT to feed through into solid basis for IP and beyond?
- What are the limitations in our assessments and in our datasets relating to learners, schools and the broader context of education that restrict our understandings of, and ways of dealing with, learning problems?

What information is the ANA providing?

- Snapshot' in relation to grade-related curricula
- Concerns about:
 - differences in 'standards' across years
 - what assessment pitched towards curriculum rather than towards learning levels can usefully tell us
 - little information on trajectories of learning, as there are no cross-grade 'anchor' items
 - similarity of exemplar and test items
- So what might looking more broadly at mathematical assessments in FP tell us about learning?

Progression in early number

| | Stages of early Arithmetical Learning | Wright et al, 2006 |
|---|--|--------------------|
| 0 | Emergent count | |
| 1 | Perceptual count | |
| 2 | Figurative count | |
| 3 | Initial number sequence | |
| 4 | Intermediate number sequence | |
| 5 | Facile number sequence | |

Other aspects like extent of FWD/BWD counting, awareness of number after/before, and use of calculating using decimal structure support extension to higher stages

Assessing learners' understandings of early number

- Weitz (2014) compared results of a township learner sample on 2011 Grade 1 ANA number items and Wright et al's oral interview diagnostic tests.
- Using 60% cut off point 'high'/'low' perf in Wright et al tests; 65% as cut off in ANA

| Groups | No in each group |
|------------------------------|------------------|
| High ANA / High Wright tests | 2 |
| Low ANA/ High Wright tests | 1 |
| High ANA/ Low Wright tests | 14 |
| Low ANA/ Low Wright tests | 12 |

'James': 66.7% ANA vs 18.2% Wright

ANA

Wright

8

- Able to identify most numbers in 1-100 range
- Unable to state the number word after a given number beyond 1-10 range, without reverting to counting from 1
- Able to answer early addition/subtraction and missing addend/subtrahend problems with counters.

Ngwala karabo ye e nepagetšego ka lepokisaneng 7.1 10 + 10 + 10 = 3010 + 10 + 10 = 3010 + 10 + 10 = 3010 + 10 + 10 = 3010 + 10 + 10 = 3010 + 10 + 10 = 30

Weitz & Venkat, 2013

Lesson Starters Project 2011-14 outcomes, Grade 2

| Stage | 2011 | (%, n=238) | 2014 (%, n=60) |
|-----------------------------------|----------------|--------------------|----------------|
| O Count all or less sophisticated | ess methods | - 11.8 | 3.3 |
| 73.9 | % | 23.5 | 15 |
| 2 | | _ 38.7 | 28.3 |
| 3 | | Count on or more | 46.7 |
| 4 | | sophisticated meth | ods 6.7 - |
| 5 | | 52.4% | 0 |

sophisticated methods 52.4%

Looking across ten schools: start and end G3, 2012

10

2012 – 2015 G3: multiple moving parts

- Repeating 2012 G3 assessment in 2015
- Can see larger proportions in the highest (80-100%) band ...
- But also in the lowest (0-29%) band in Feb 2015 in 7/10 schools

Leads to attention to moving parts in the system

 Learner mobility within and between grades, as well as attendance issues.
 Teacher mobility

Teacher knowledge

11

Two key issues

Increasing learner numbers in most schools

| School | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
|--------------------|-----|-----|-----|-----|-----|-----|-----|-----|----|----|
| Feb 2012 number | 241 | 231 | 223 | 295 | 89 | 149 | 102 | 96 | 76 | 87 |
| Feb 2015 number | 223 | 320 | 299 | 308 | 145 | 167 | 117 | 172 | 80 | 87 |
| % change | -7 | 39 | 34 | 4 | 63 | 12 | 15 | 79 | 5 | 0 |

 Some international evidence that moves to more prescriptive sequencing and pacing, while raising 'the middle', can create a learner 'underclass'

FP numeracy in partner schools

- Teaching with direction and coherence is improving
- Curriculum coverage is improving
- Home languages not being leveraged sufficiently for mathematical learning, e.g. for explaining structure of decimal number system:

236 is 'makgolo pedi masome tharo tshela' – literally 'hundreds two tens three six' (Mdluli, forthcoming)

- Continually shifting ground in terms of learner mobility/ language base
- Teacher mobility and ongoing difficulties with recruitment

Improving primary maths assessments

- Include items and item formats that test for sophistication of strategies, not just answers
- Thinking about a mental mathematics assessment component
- Include skills trajectory-focused 'anchor' items alongside curriculum grade-related items
- Electronic marking templates for faster diagnostic feedback
- Monitoring shifts in central tendency measures, and developing initiatives over time for the low performing minority

THANK YOU
