 **RESEP**
Research on Socio-Economic Policy

BACKGROUND

- Strong relationship between socio-economic status (SES) and learning outcomes

BACKGROUND

- Strong relationship between socio-economic status (SES) and learning outcomes
- However, there are always exceptions to this rule – “outlier” learners who manage to achieve results above expectations despite their SES

BACKGROUND

- Strong relationship between socio-economic status (SES) and learning outcomes
 - However, there are always exceptions to this rule – “outlier” learners who manage to achieve results above expectations despite their SES
 - **Is this also true in SA?**
- 
- A decorative wavy line in a light gray color spans the width of the slide at the bottom.

BACKGROUND

- Strong relationship between socio-economic status (SES) and learning outcomes
- However, there are always exceptions to this rule – “outlier” learners who manage to achieve results above expectations despite their SES
- **Is this also true in SA?**
 - “Outlier schools”: even in underperforming schools there are students who achieve unusually good results in reading comprehension relative to their peers (Wills, 2017)

BACKGROUND

- Strong relationship between socio-economic status (SES) and learning outcomes
 - However, there are always exceptions to this rule – “outlier” learners who manage to achieve results above expectations despite their SES
 - **Is this also true in SA?**
 - “Outlier schools”: even in underperforming schools there are students who achieve unusually good results in reading comprehension relative to their peers (Wills, 2017)
 - **Are these outlier learners different from their peers in observable ways?**
 - Schools? Families? Individuals?
- 
- A decorative wavy line in a light gray color spans the width of the slide at the bottom.

MOTIVATION

MOTIVATION

- If we want to understand how to disrupt the strong relationship between SES and learning outcomes on average, perhaps a good place to start is the learners who manage to overcome their socio-economic disadvantage to achieve good learning outcomes.

LITERATURE

- “Resilience” first studied by psychiatrists (Rutter)
 - “positive adaptation in the face of adversity”

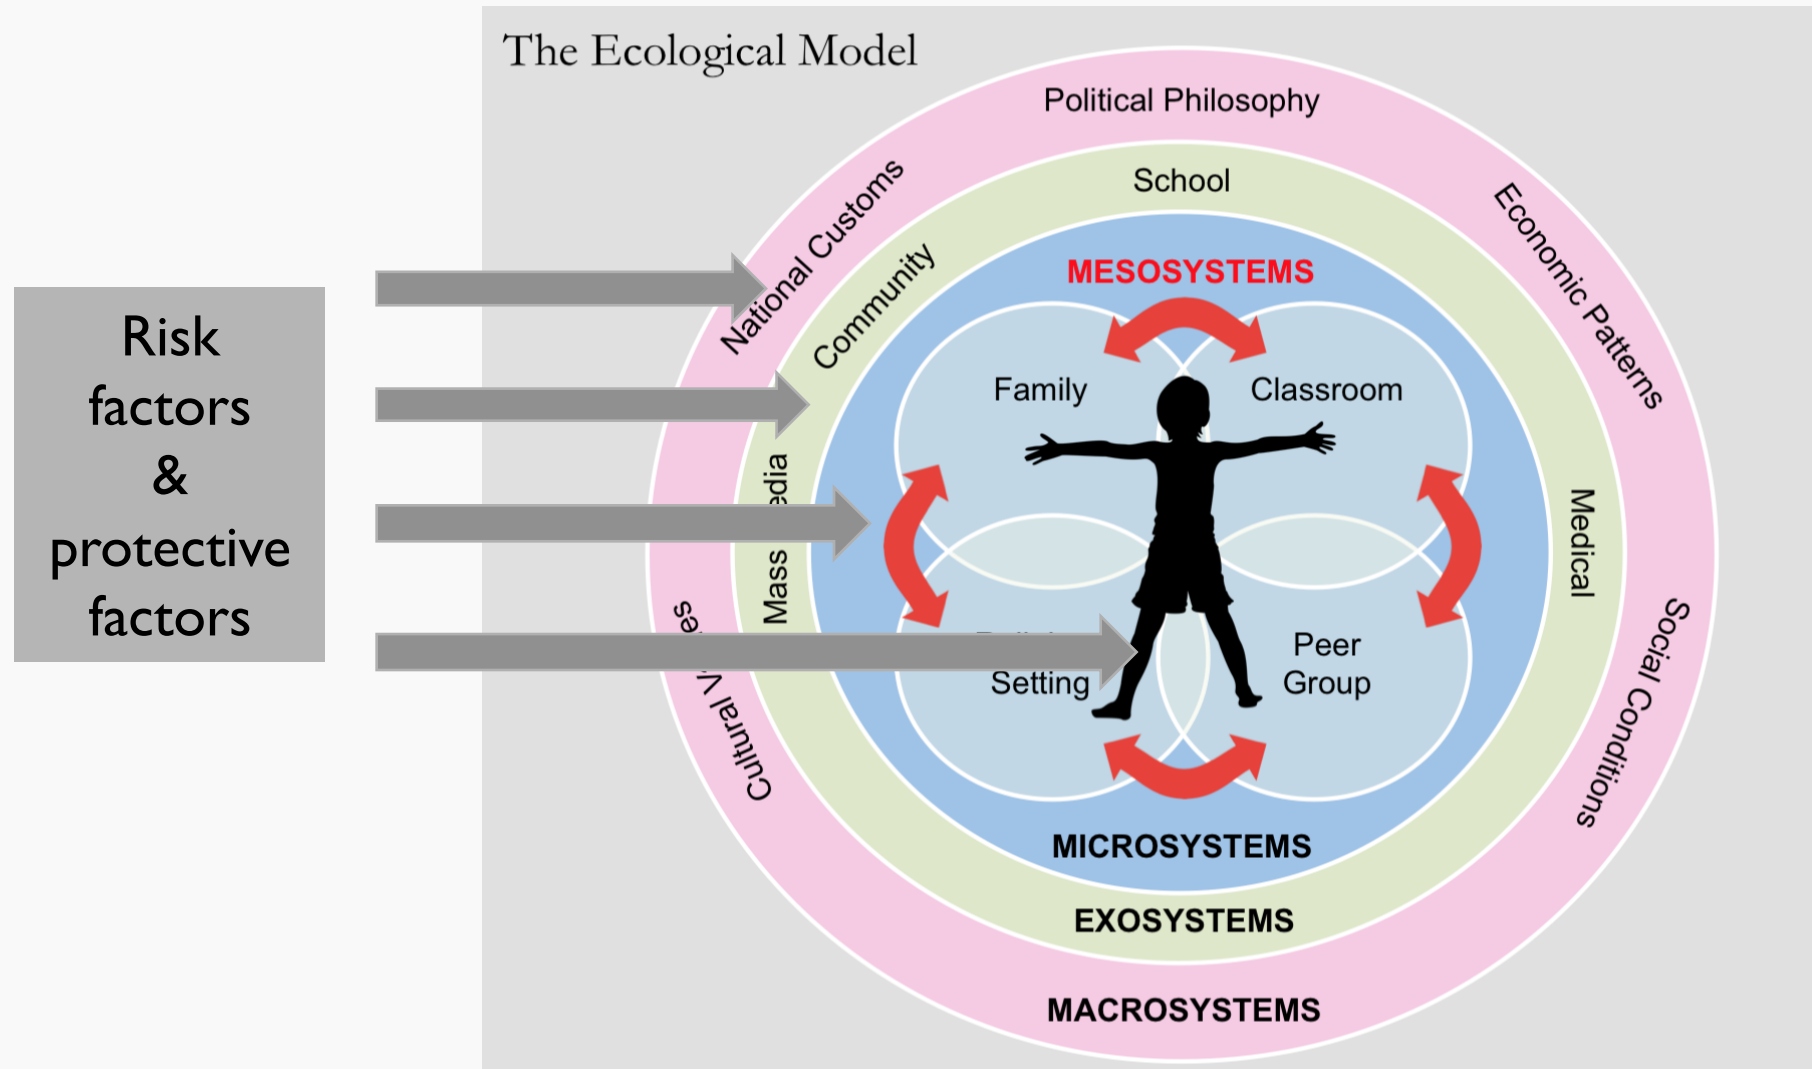

LITERATURE

- “Resilience” first studied by psychiatrists (Rutter)
 - “positive adaptation in the face of adversity”
 - Risk factors vs. protective factors

Ecological model of development

The Ecological Model

LITERATURE

- This theoretical framework applied by educational psychologists to explain **learning** outcomes that exceed expectations
 - “Academic resilience”

LITERATURE

- This theoretical framework applied by educational psychologists to explain **learning** outcomes that exceed expectations
 - “Academic resilience”
- Within this framework, outlier learners’ performance can be explained as the result of having protective factors that offset the risk that poverty poses to their academic success

DATA

- Over 2600 Grade 6 learners across 60 rural and township primary schools across three provinces

DATA

- Over 2600 Grade 6 learners across 60 rural and township primary schools across three provinces.
- Purposeful sampling: schools positioned in challenging contexts, i.e. learners are all in “vulnerable” conditions
 - Poverty as major risk factor for all learners in sample

DATA

- Over 2600 Grade 6 learners across 60 rural and township primary schools across three provinces
- Purposeful sampling: schools positioned in challenging contexts, i.e. learners are all in “vulnerable” conditions
 - Poverty as major risk factor for all learners in sample
- Outcome variable: English reading comprehension test scores
 - Same test written twice

ASSESSMENT

Questions Fly, Eagle, Fly

1. What did the farmer set out to look for at the beginning of the story?

- a) a calf
- b) herders
- c) rocky cliffs
- d) a chick

2. Where did the farmer find the eagle chick?

- a) in its nest
- b) by the riverbed
- c) on a ledge of rock
- d) among the reeds

Released items from
previous PIRLS tests

5. During the friend's first visit, the eagle chick behaved like a chicken.

Give two examples that show this. (2 marks)

1. _____

2. _____

ATTITUDE TO SCHOOL INDEX

**Attitude to school
index (z-score)**

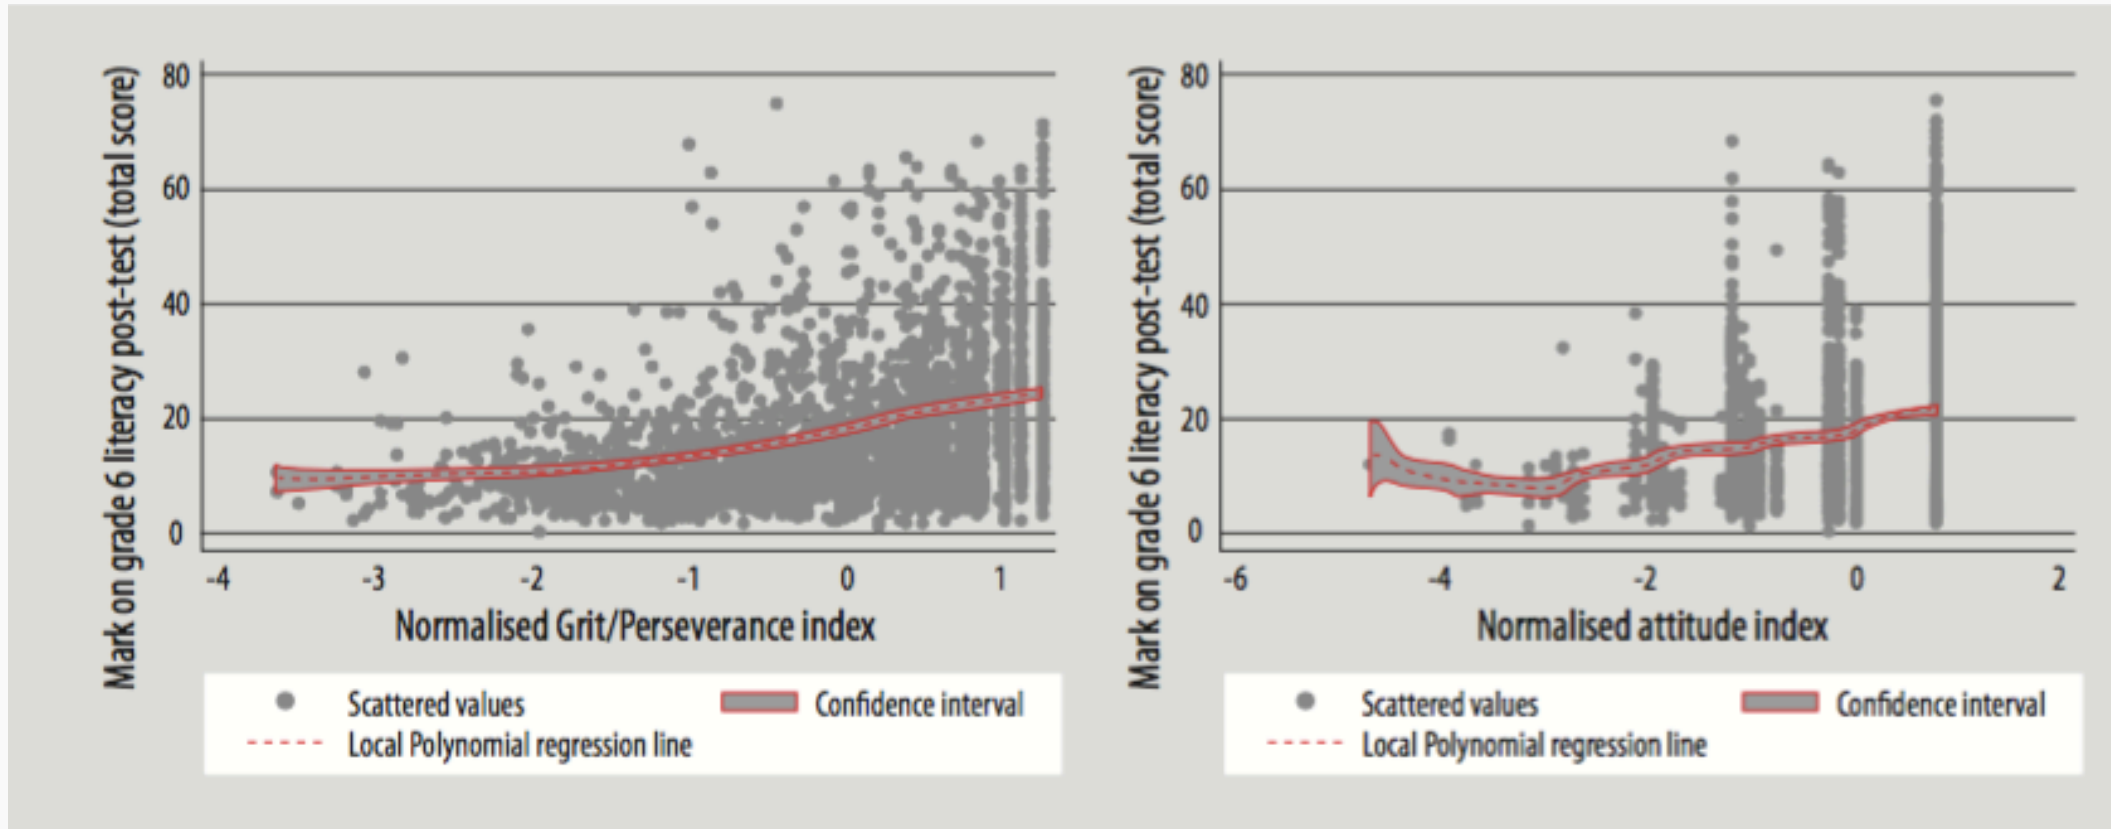

A principal components index derived from 4 questions asked of students:

- i) **How much do you learn in school every day?** [Not very much, A little, A lot!]
- ii) **How excited are you to go to school each day?** [Not excited at all, A little excited, Very excited!]
- iii) **How much do you think your teacher cares about you?** [Not at all, A little, A lot!]
- iv) **Do you feel like your teacher believes in you?** [No, Yes, I don't know].

ESTIMATING PROBABILITY OF BEING RESILIENT

$$\begin{array}{ccccccc} \text{Home} & & \text{School} & & \text{Perseverance,} & & \text{Resilient:} \\ \text{background} & + & \text{factors} & + & \text{aspirations,} & = & \text{Yes/No?} \\ & & & & \text{attitudes to} & & \\ & & & & \text{school} & & \end{array}$$

Literacy performance against grit and attitudes to school

Source: 2017 'Leadership for Literacy' dataset. The scatter points represent 2379 different learners from 60 different schools. A local polynomial regression line shows a relationship between two variables that best fits the data.

CONCLUSIONS

Resilient learners differ from their peers across a number of dimensions, with **socio-emotional skills** (perseverance and aspirations) emerging as the strongest and most consistent predictors of resilience.

WHERE TO FROM HERE?

- Interviews with learners, parents and teachers to try to understand why some learners have more perseverance and higher aspirations than others
- Policies to foster perseverance at the school level

THANK YOU
